

Data Science Salary Trends: Global Analysis

Exploring Salary Trends and Factors in Data Science

IST 719: Information Visualization | Name: Mugdha Karodkar

The Motivation

This analysis is valuable for aspiring data science professionals, students, and industry leaders aiming to understand the key factors influencing compensation. It provides actionable insights for career planning, salary benchmarking, and developing competitive strategies in the data science field. By bridging academic research with industry trends, this study highlights the evolving dynamics of data science roles in a global job market.

Leading Question

How does the interaction between experience level and geographical region influence data science salaries, and which factors contribute most to the observed differences in compensation across markets?

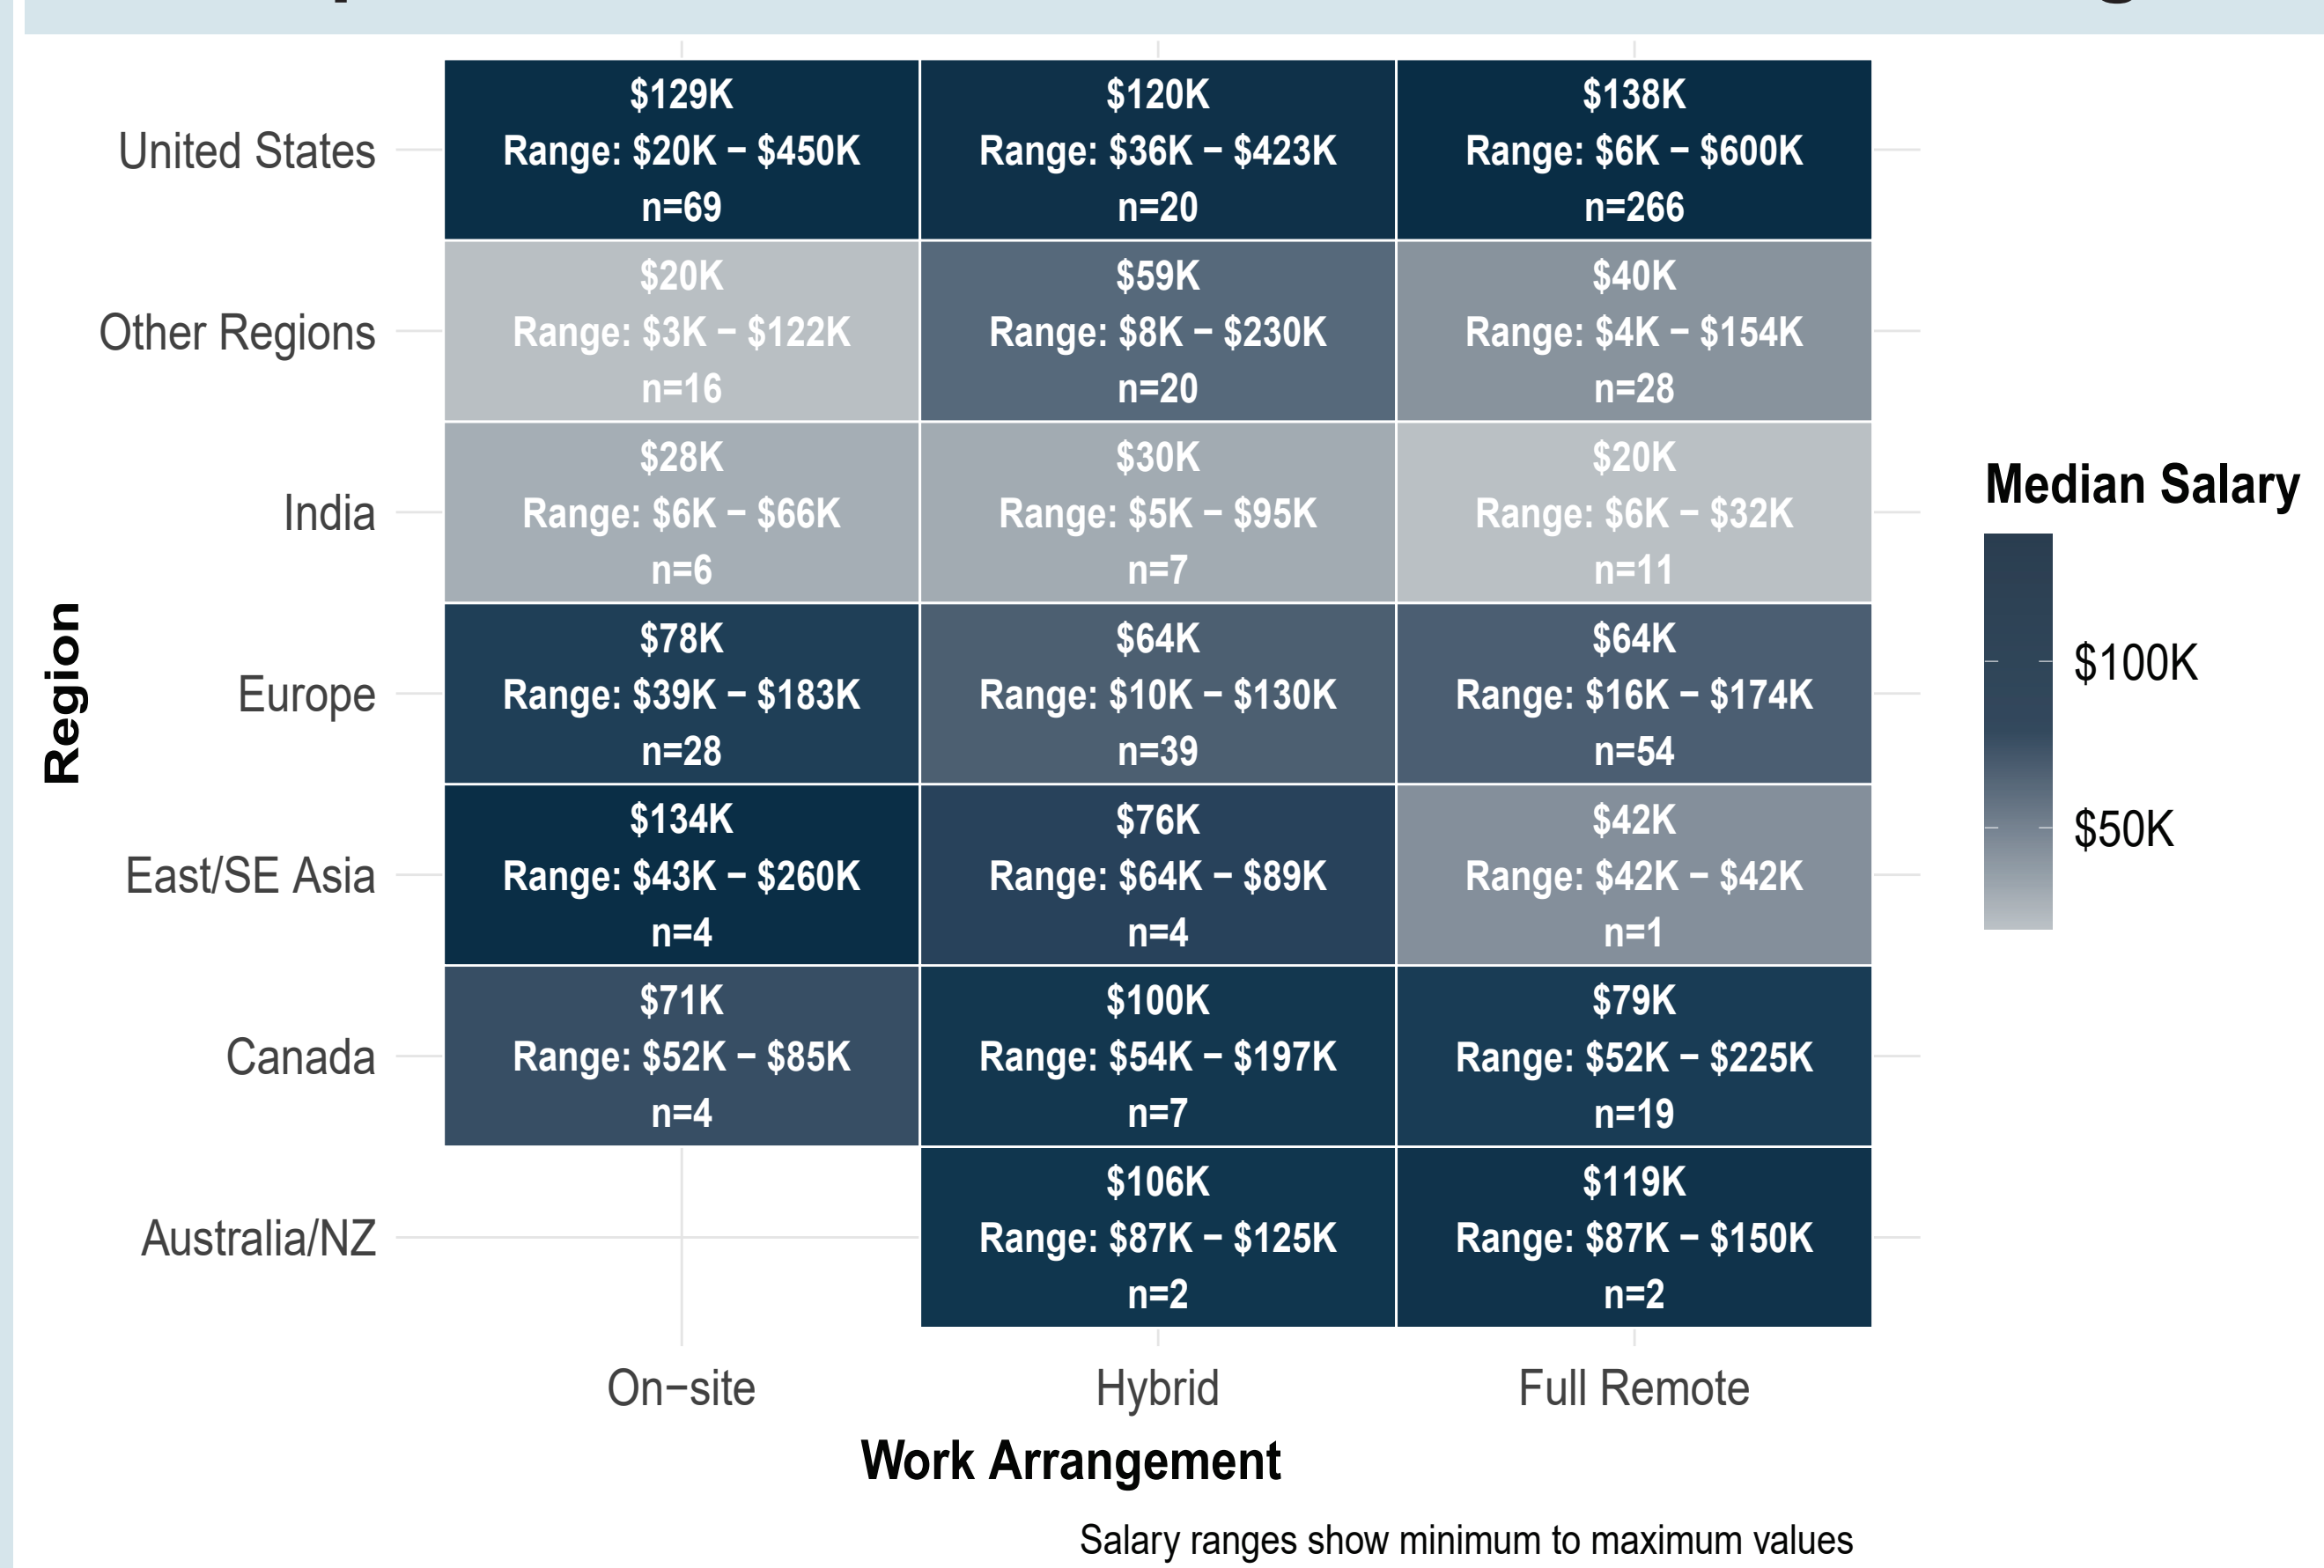

Data Description

The dataset, sourced from Kaggle, consists of **607 observations** and **12 attributes** covering job **titles(49)**, salaries, **company locations(27)**, and remote work setups for data professionals worldwide. Cleaning and transformations were performed to standardize experience levels, company sizes, and remote work categories, job titles,company locations while deriving new insights. Data spans the years 2020-2022, reflecting recent trends.

Story

The analysis highlights how experience level, company size, and remote work shape data science salaries globally. Senior professionals in large U.S. firms earn the highest, while entry-level roles in smaller companies see lower pay. The data reveals critical patterns in regional pay gaps, remote work benefits, and salary trends, empowering professionals and organizations to make informed career and hiring decisions.

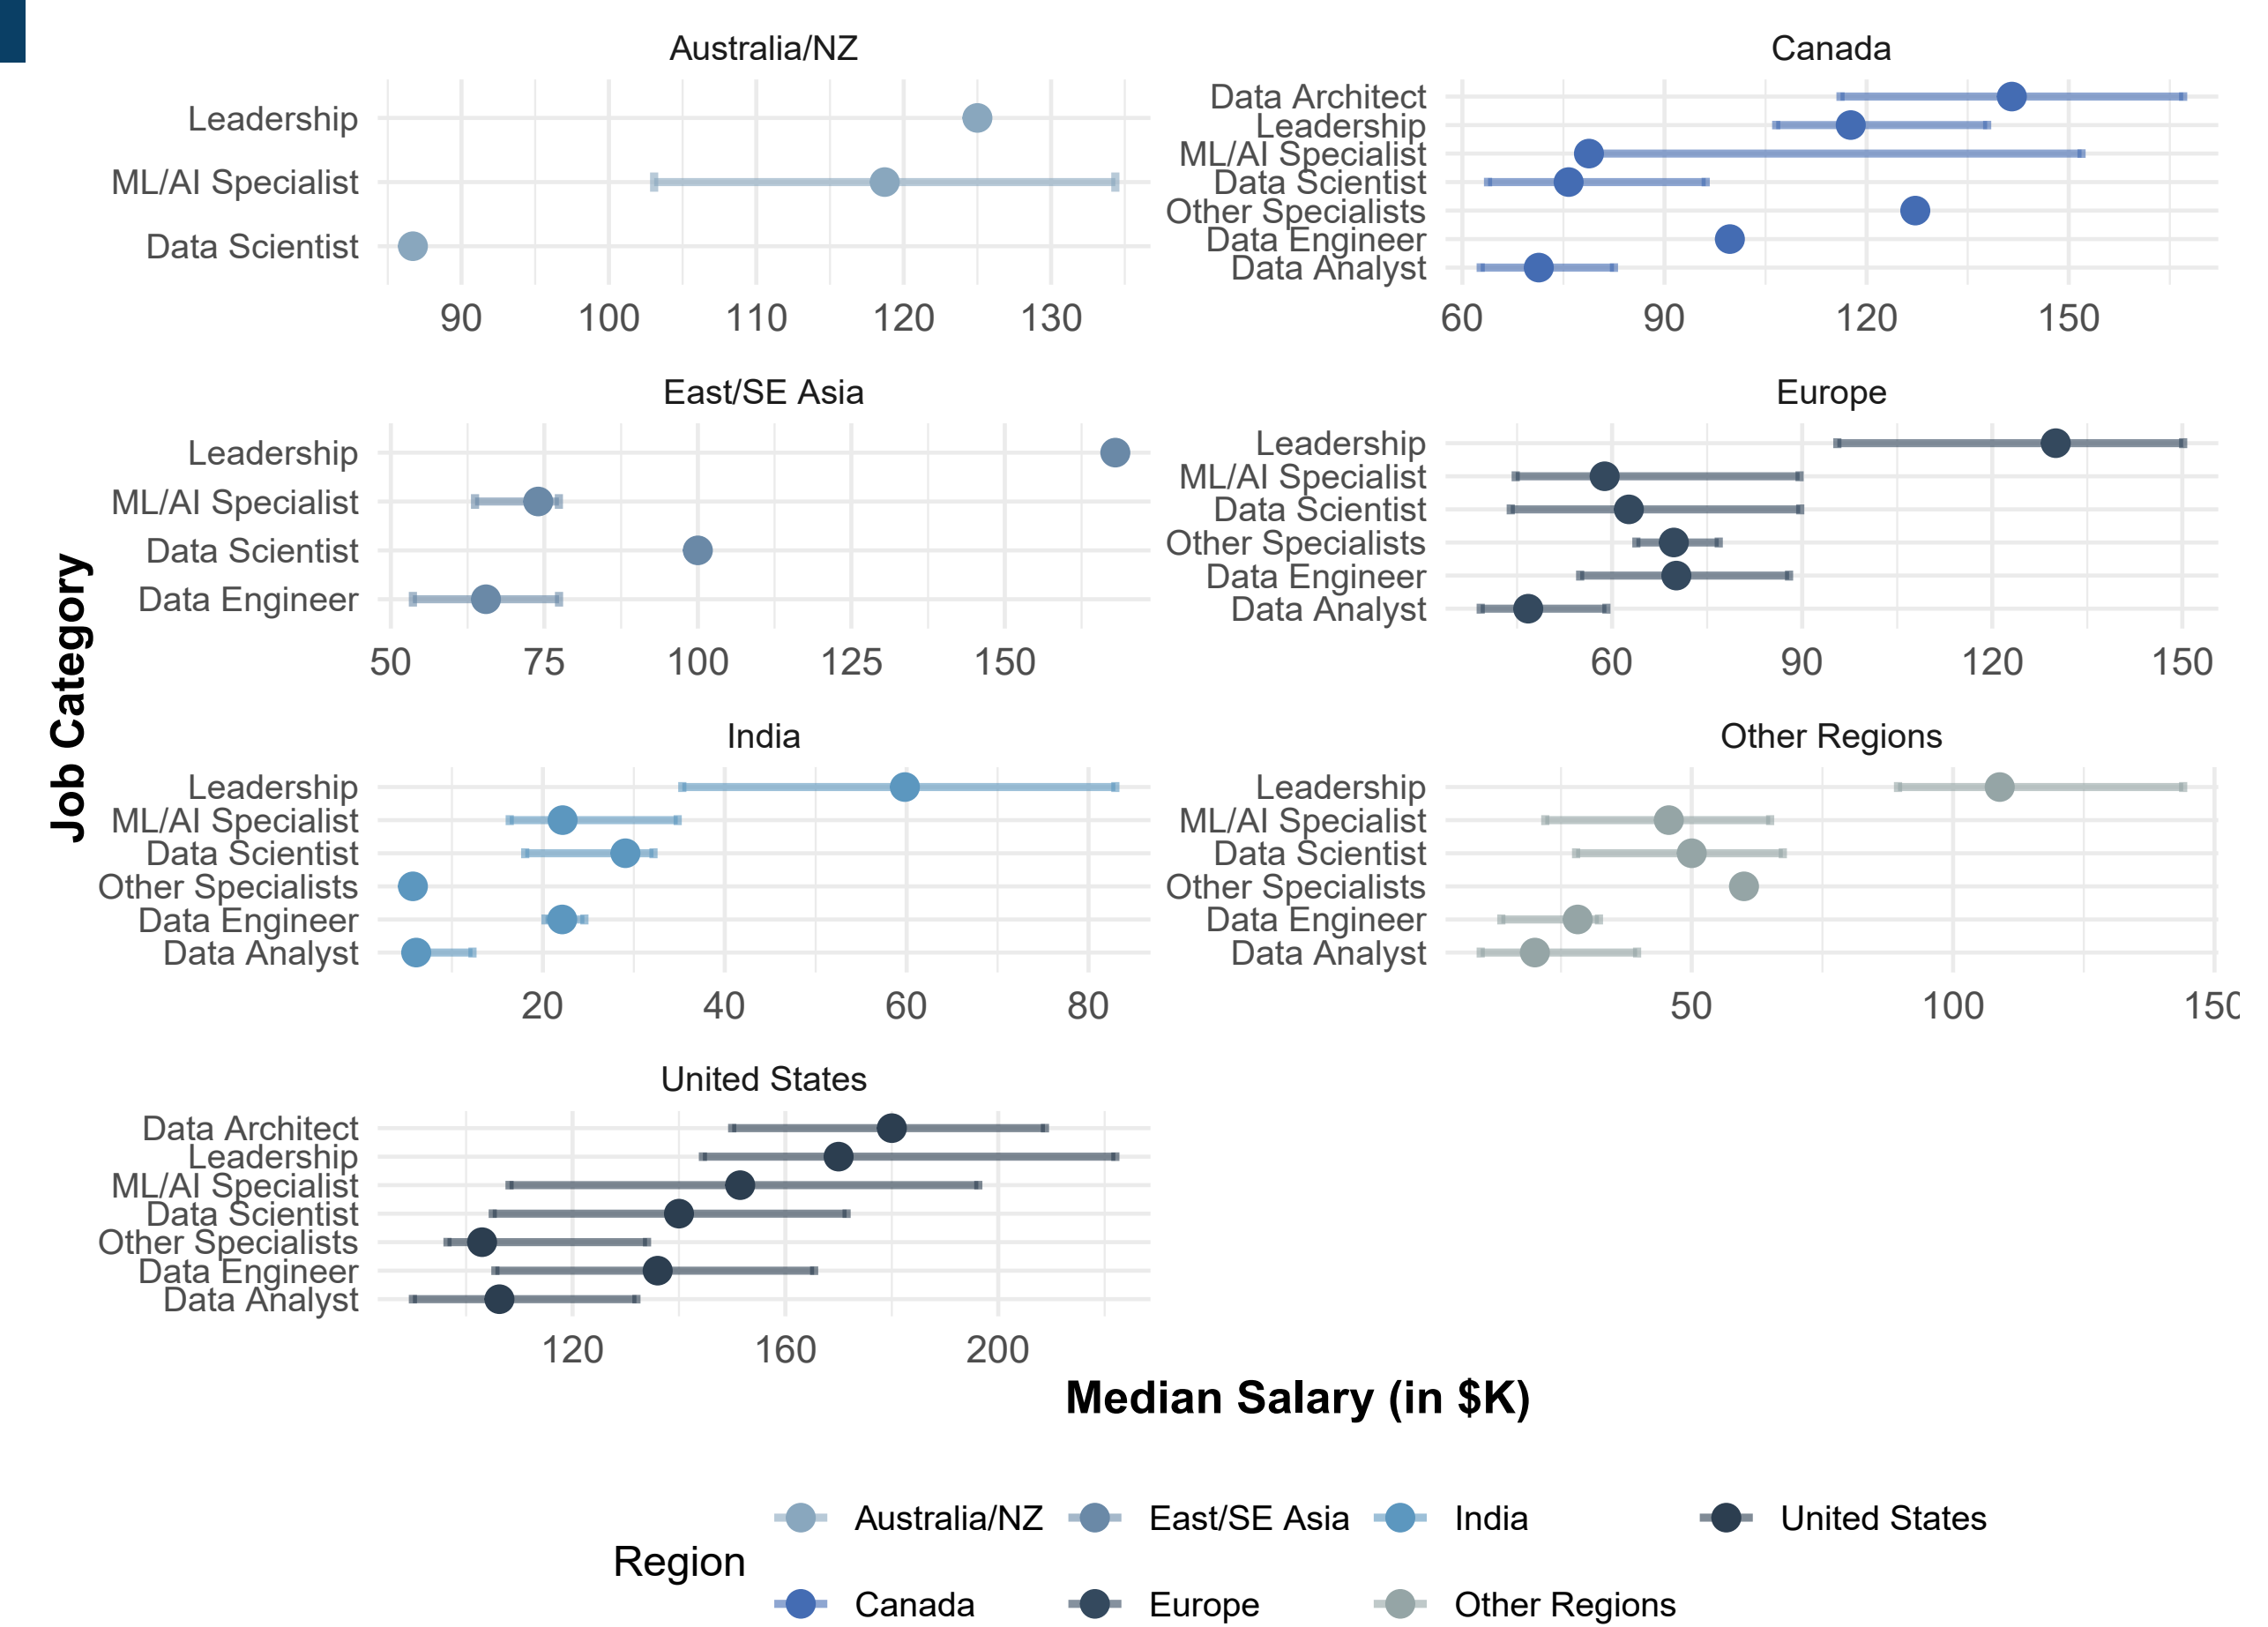

The Impact of Remote Work on Salaries Across Regions
